INTRODUCTION

In Latin America, the sexual health of Indigenous Peoples remains neglected, particularly among adolescents who speak Indigenous languages. This is largely because sexual education is rarely adapted to their language and cultural context. Consequently, rates of adolescent pregnancy, perinatal death, and sexually transmitted infections (STIs) remain high and, in some areas, continue to rise. In this context, transcultural nursing interventions are essential to promote condom use among Indigenous adolescents.

(CONAPO, 2021; INMUJE, 2022; Hubert et al., 2024).

GOAL

Determine the effect of a sexual health educational intervention on condom use self-efficacy in adolescents from and Indigenous community in Nahuas Mexico.

INTERVENTION

To strengthen condom use self-efficacy, a bilingual (Spanish–Nahuatl) community workshop was conducted.

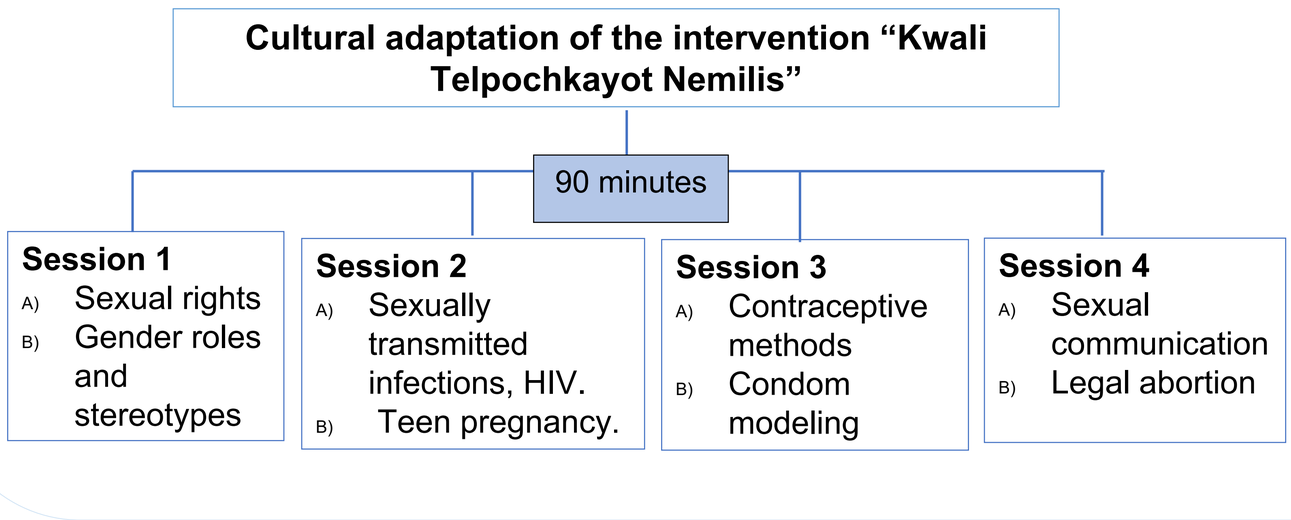

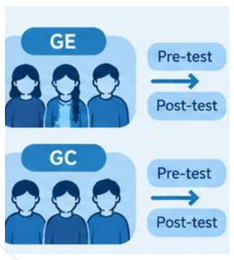

Chart 1.
Educational materials used in the intervention in Nahuatl

METHOD

Design

- Experimental
- Experimental group (EG)
- Control group (CG)Test, Re-test

Population

- Nahua teenagers aged 15-19

Sample

- 81 teenagers
- **GE:** n=41
- **GC:** n=40

Instrument

- Self-efficacy of condom use in Nahuatl

RESULTS

Table 1

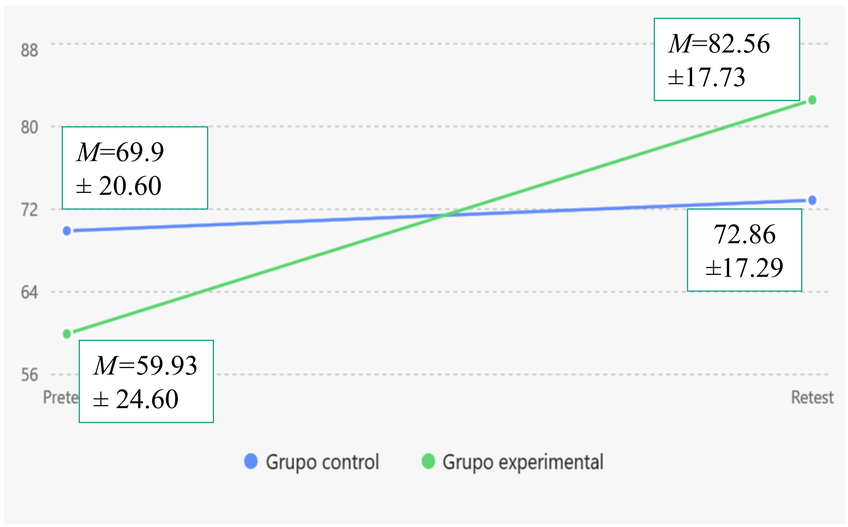

Sociocultural characteristics

Variable	Control Group %	Experimental Group %
Sex		
Female	50	42
Male	50	59
Náhuatl as mother tongue		
Yes	95	90.2
No	5	9.8
Sexual debut		
Yes	20	19.5
No	80	80.5
Total	100%	100%

Table 2.

Changes in condom-use self-efficacy scores from pretest to retest by study group

Group	Pretest	Retest	Change
GC	69.90 ± 20.60	72.86 ± 17.29	2.96
GE	59.93 ± 24.60	82.56 ± 17.73	22.63

Nota. Elaboración propia

t of student for related samples
(Re-test)
GC *p*=.251
GE *p*=.000

CONCLUSION

- The educational intervention in the Nahuatl language proved to be effective in increasing self-efficacy for condom use.
- It was evident that a culturally relevant strategy, focused on the language and context of the population, can positively influence the adoption of health-promoting behavior.
- It provides an alternative that could support national sexual education programs in primary health care for the Indigenous Peoples of Mexico.

Technological reflection on equity: The intervention promotes equity by bringing sexual health information to Nahuatl-speaking adolescents, strengthening their access to knowledge and their ability to make informed decisions.
